The TKP pumps are circulation pumps with motors over the water surface. So nearly all the motor energy will be cooled by air and not with water like submersible pumps. At hot summer days these type of pumps will not warm up the water.

The pump can be mounted directly at vertical glass (maximum 12 mm). If you want to install this pump at horizontal glass you need the holder. Never use this pump without a filter grid (fish protector) in the aquarium. If the currents should be produced in deeper water you can use an extension for the filter grid.

This type of pump can be controlled with a current controller. With this combination it is possible to create nearly natural water currents. The animals are growing better, the fishes must “work” against the currents and sediments will not settle down so quickly.

The pumps can be supplied with different filter cartridges.

Type	TP1300	TKP2000	TKP3500
max. water flow in l/h	1300	2000	3500
max. water pressure in m	0,105	0,12	0,12
power in watts	38	46	46
all pumps with 1.1 m cable			
order number TKP pumps:	400-010	400-020	400-035

## Sponge filter for TKP pumps

sponge filter complete, lengths 15 cm 400-993

spare sponge 400-992

## Cup Filter for TKP pumps

16 cm	400-994
20 cm	400-995
40 cm	400-996
spare fleece for cup filter	
16 cm	400-986
20 cm	400-987
40 cm	400-988

## Universal Filter for TKP pumps

16 cm	400-989
20 cm	400-990
40 cm	400-991

Extension for inlet TKP pumps, lengths 17 cm, 400-997

Filter Grid (fish protector) for TKP pumps 400-998

Holder for horizontal glass (max. 12 mm) 400-999
